

# AICPM v1.1 HBC Addendum

---

AICPM v1.1 ADDER - Headline-Body Consistency (HBC)

Status: Phase I extension proposal (structure-only)

## Purpose

Preserve expectation integrity between headline and body without judging intent.

HBC belongs in AICPM (structure), not LFV (claim logic).

## Deterministic pipeline

### A) Headline expectation extraction

- Temporal implication: immediate/recent/historical/unspecified
- Event type
- Magnitude: numbers, absolutes
- Certainty language

### B) Body grounding extraction

- Explicit dates
- Clarifiers (historical/archive/in YYYY)
- Corrections/reframing
- Disclosure timing (early vs late)

### C) Alignment comparison across axes

- Temporal alignment (aligned/misaligned)
- Scope alignment
- Magnitude alignment
- Certainty alignment
- Context disclosure timing (early/late)

Output (nutrition-style, no intent labels)

## Headline-Body Consistency (HBC)

- Temporal alignment: OK/MISALIGNED
- Scope alignment: OK/MISALIGNED
- Magnitude alignment: OK/MISALIGNED
- Certainty alignment: OK/REDUCED
- Disclosure timing: EARLY/LATE

## Neutral advisory example

"Headline implies current event. Article describes historical event (1979)."

## Non-goals

- No "clickbait" label
- No ranking or blocking
- No motive inference

End of HBC Addendum
